

Haleta / HR / Employee Master IA

10 primary tabs, with lower-frequency/admin information under **More**.

Primary tabs

1. **Overview**
2. **Personal**
3. **Employment**
4. **Compensation**
5. **Qualifications**
6. **Family**
7. **Compliance**
8. **Performance**
9. **Attendance & Leave**
10. **Documents**

More ▼

11. **Assets**
12. **Career & History**
13. **Audit Log**

This gives HR users the most frequently accessed information without creating a crowded tab bar.

12. Career & History	17
13. Audit Log	18
My strongest UX recommendations	18
One additional structural recommendation	19

1. Overview

This should **not contain editable sections from every other tab**. It should be a dashboard/summary.

Employee Header

- Employee photo
- Employee name
- Employee ID
- Job title
- Department
- Employment status
- Work location
- Manager
- Hire date

KPI / Summary cards

- Employment status
- Leave balance
- Attendance this month
- Current salary
- Performance rating
- Contract status

Quick Actions

- Edit Employee
- Assign Leave
- Change Position
- Upload Document
- Assign Asset
- Change Salary

Summary sections

Employment Summary

- Department
- Position
- Employment type
- Contract
- Manager
- Work location
- Hire date

Attendance & Leave

- Present
- Absent
- Late
- Leave balance

Recent Activity

- Salary changed
- Promotion
- Document uploaded
- Leave approved

Alerts / Actions Required

- Contract expiring
- Certification expiring
- Missing document
- Tax registration missing

This makes Overview genuinely useful rather than another long form.

Note

- * = represents party data
- Red color highlighted data not presented in schema
- Orange color highlighted data missed in UI

2. Personal

Your proposed structure is good. I'd refine the section naming:

Basic Information

- First Name, Middle name, last name,
- Date of birth *
- Gender *
- Phone Number
- Personal Email
- Marital status * ???
- Blood Group *

Demographics & Citizenship

- Nationality *, Nationality Type, National ID *, Place of birth *

Residential Address

- Country??? Based on entity
- Address Type * missed in UI
- Admin Unit: Region / City Administration, Zone / Sub-city, Woreda, Kebele *
- Street *
- House Number *??
- Postal code *
- Effective From *

- Effective To *

Disability & Accommodations

- Disability status
- Accommodation requirements
- Accessibility needs
- *Remarks/Signature ??? how to insert digital signature*

UX recommendation: add info Don't expose sensitive disability information prominently on the overview. Keep it inside Personal/Compliance with appropriate permissions.

3. Employment

This should be the **core HR relationship record**.

Organization Placement

- Company/entity: tree based from business group -> branch
- Department
- Job Position: when select show Job position with grade
- Manager / Direct Supervisor
- Current Work location
- Employment status
- *Working email*
- *Hired from Candidate???*
- *Hired from Recruitment Result ???*
- *Hired from Job Offer ???*

Employment Contract

- *Employment Type: How behave ux at various type of employment (permanent | contract | temporary | probation | part_time | intern | consultant)*

- Contract type
- Start date
- End date
- *Probation period*
- *Probation end date*
- Working hours
- Work schedule
- Contract status

Statutory & Tax Registration

- TIN Number / Taxpayer ID
- POESSA Pension number
- Statutory Rule Exemptions
 - *Status*
 - *Source type*
 - *Source*

4. Compensation

Good separation.

Starting Salary & Remuneration

- Salary Grade
- Job Grade Scale Steps
- Monthly Base Salary (ETB)
- Currency
- Package Authorized By
- Effective date

Allowances & Benefits

Great work → dynamic table but add one sample record to show how behave

- Housing allowance
- Transport allowance
- Meal allowance
- Medical benefit
- Other benefits

Primary Salary Disbursement Account

- Bank / Payment Provider
- Account holder
- Account number
- Account type
- Currency
- Split Share(%)
- Verification status

Important UX

Don't show the full bank account number everywhere.

Use something like: **** * 4821 with permission-controlled **View/Edit**.

5. Qualifications

I like this as a dedicated tab.

Academic Qualifications

- Degree *
- Institution *
- Field of study *

- Country and Admin Unit *??
- Starting date *
- Graduation date including year *
- Grade/GPA *
- IS Verified
- Verified By
- Verified At

Professional Certifications

- Certification *
- Issuing organization *
- Certificate number *
- Issue date *
- Expiry date *
- Attachment *???
- URL *???
- IS Verified
- Verified By
- Verified At

Work Experience

- Employer / Organization *
- Position *
- Employment type*
- Start date *
- End date *
- Responsibilities *
- Why Leaving the Company *
- Reference Person *

- IS Verified
- Verified By
- Verified At
-

Skills & Language Competencies

- This is great work

UX recommendation

These should be **repeatable table records**, not giant forms.

Example:

Degree	Institution	Field	Year	Actions
MSc	University X	IT	2023	Edit · Delete
BSc	University Y	IT	2018	Edit · Delete

+ Add Qualification

6. Family

Definitely keep this as a separate tab since Haleta will support payroll, benefits, emergency management, and employee welfare.

Emergency Contacts

Name	Relationship	Phone	Primary	Actions
------	--------------	-------	---------	---------

Dependents

Name	Relationship	DOB	Benefit Eligible	Actions
------	--------------	-----	------------------	---------

- **Benefit Notes**

7. Compliance

This is where I would make a significant change.

You currently have:

- Statutory Registration & Regulatory Clearances
- Employee Guarantor
- **Disability & Accommodations**

I'd structure it as:

Statutory Registration

- Tax registration
- Pension registration
- Social security
- Other statutory identifiers

Regulatory Clearances

- Clearance type
- Issuing authority
- Issue date

- Expiry date
- Status
- Document

Employee Guarantor

I would move this out of Compliance and keep it under Personal, unless there is a specific regulatory reason to treat it as compliance data.

Why? Because:

- **Disability = employee personal information**
- Compliance = regulatory/legal obligations

Separating those concepts creates a cleaner domain model and better permission management.

8. Performance

Keep this independent from Employment.

Performance Overview

- Current rating
- Current cycle
- Goals completion
- Review status

Performance Reviews

- Evaluation cycle
- Reviewer
- Rating
- Review date

- Status

Goals / KPIs

- Goal
- KPI
- Target
- Achievement
- Weight
- Status

Development Plan

- Development goal
- Training
- Action plan
- Progress

This should connect to your **performance evaluation/cycle schema** rather than duplicating employee information.

9. Attendance & Leave

I would combine these as you proposed.

Attendance Summary

- Present
- Absent
- Late
- Early departure
- Overtime

Attendance History

Work Schedule

- Schedule
- Shift
- Working days

Leave Balance

- Annual
- Sick
- Personal
- Maternity/Paternity
- Other

Leave History

This is much better than separate Attendance and Leave tabs because HR users frequently need to understand them together.

10. Documents

This should become a **document repository for the employee**, not just an upload page.

Categories

Identity

- National ID
- Passport
- Other identification

Employment

- Employment contract
- Offer letter
- Promotion letter

Education

- Degree
- Transcript
- Certificate

Compliance

- Tax documents
- Clearance
- Regulatory documents

Other

Each document should have:

- Document type
- Document name
- Issue date
- Expiry date
- Status
- Uploaded by
- Uploaded date
- Version

Important feature

Add: **Expiring Soon** This becomes very valuable for HR.

11. Assets

Put this under **More**.

Assigned Assets

Asset Type Serial No. Assigned Date Status

Examples:

- Laptop
- Phone
- Vehicle
- ID card
- Access card
- Equipment

Include:

Assign Asset → Return Asset → Transfer Asset

12. Career & History

Also put this under **More**.

This should be a **timeline**, not another form-heavy page.

Example:

2026

|

|— Promotion

| Senior Accountant → Finance Manager

- |
- | — Salary Adjustment
- | 72,000 → 87,240 ETB
- |
- 2025
- |
- | — Department Transfer
- | Operations → Finance
- |
- 2024
- |
- | — Joined Company
- Finance Department

This gives HR a very powerful employee history view.

13. Audit Log

Definitely keep this under **More**.

This is primarily an administrative/security function.

Example:

Date	User	Action	Field	Previous	New
Sep 18	HR Admin	Updated	Salary	72,000	87,240
Sep 15	HR Admin	Changed	Department	Operations	Finance
Sep 10	HR Admin	Uploaded	Contract	—	Contract-v3.pdf

Add filters: **User · Action · Date · Module**

My strongest UX recommendations

Your current idea	Recommendation
-------------------	----------------

13 tabs	10 primary + 3 under More
Emergency contact in Employment	Move to Family
Dependents in Employment	Move to Family
Disability in Compliance	Move to Personal
Statutory registration in Employment + Compliance	Avoid duplication; make Compliance the source of truth
Attendance + Leave	Keep combined
Career & History	Timeline view
Audit Log	Admin-only More menu
Qualifications	Repeatable tables/cards
Documents	Categorized document repository + expiry tracking
Overview	Dashboard, not another data-entry form

One additional structural recommendation

For Haleta, I would distinguish between **Employee Master data** and **transaction/history data**.

Master data

Personal · Employment · Compensation · Qualifications · Family · Compliance

Operational/history

Performance · Attendance & Leave · Documents · Assets · Career & History · Audit Log
